

KArrion

General Design Documentation

Version 1.0	2/27/2026
-------------	-----------

Overview:

A Survival Shooter x Tycoon where resources, weapons, and progress can be lost at any time. Players will alternate between building up their tycoons and scavenging from a wasteland filled with hostile players and Carrions.

Game Loop:

KArrion alternates between two primary modes of gameplay that feed into one another.

1. Tycoon builder

KArrion has a simple tycoon system that can be simplified into three families of **buildings**, each containing their **assets**, **inflows** and **outflows**.

- 1. Generators
- 2. Processors
- 3. Refiners

Category	Description	Inflow / Outflow
Generators	The most basic building. Generates / duplicates Raw Materials to fuel your tycoon.	Inflow: Raw Materials
		Outflow: Raw Materials; XP
Processors	The primary sink of Raw Materials. Produces valuables and the most basic parts used for crafting.	Inflow: Raw Materials
		Outflow: Processed materials, which are more valuable and required for crafting; XP

Refiners	The primary sink of Processed Materials. Required to fuel advanced crafting and the endgame.	Inflow: Processed materials
		Outflow: Refined materials, which are the most valuable in game and required for crafting the most advanced equipment; XP

2. Survival shooter

KArrion's shooter gameplay can be almost directly paralleled to that of *Arc Raiders*: Anything the player brings outside the safety of their tycoon can be lost on death and scavenged by other players. This encourages players to constantly weigh risk against award:

EX.

- Equip a tactical loadout → Higher chances of survival → Larger risk
- Equip a rudimentary loadout → Lower chances of survival → Lower risk

Core Features

In this section, you will find the fundamental components of *KArrion's* gameplay.

1. Inventory:

The Inventory system of *KArrion* will be very similar to that of *Arc Raiders*, where inventory slots will be separated into **five** different categories:

Weapons	Items that players will actively hold and the primary driver of combat in <i>KArrion</i> . Includes both
---------	--

	melee weapons and firearms.
Body	Items that players can equip to their body that boosts their overall stats, such as body armor, shields, extra backpacks, O2 canisters, etc.
Interactables	Slotted, consumable items that players can use at will such as stims, grenades, or band-aids.
Backpack	The biggest part of the inventory and used to store items. Players cannot 'equip' or use anything in their backpack during gameplay, but can move items in their backpack to either the Weapons, Body, or Interactables slots to use them.
Valuables	The smallest part of the inventory and used to store items. Functionally the same as the Backpack, though items stored here cannot be lost on death.

ARC Raider's Inventory System

The number of slots per category is dynamic, and can be changed depending on the player's individual specs. Items in player inventory (excluding those placed in the Valuables section) are dropped on death and can be retrieved by ANY other player.

2. Items

Items in *Karrion* can be separated into **four** different categories. Here, you will find detailed descriptions of some core items in each Category (these are not final, and can be expanded or reduced during production); these items will also be listed from common to rarest.

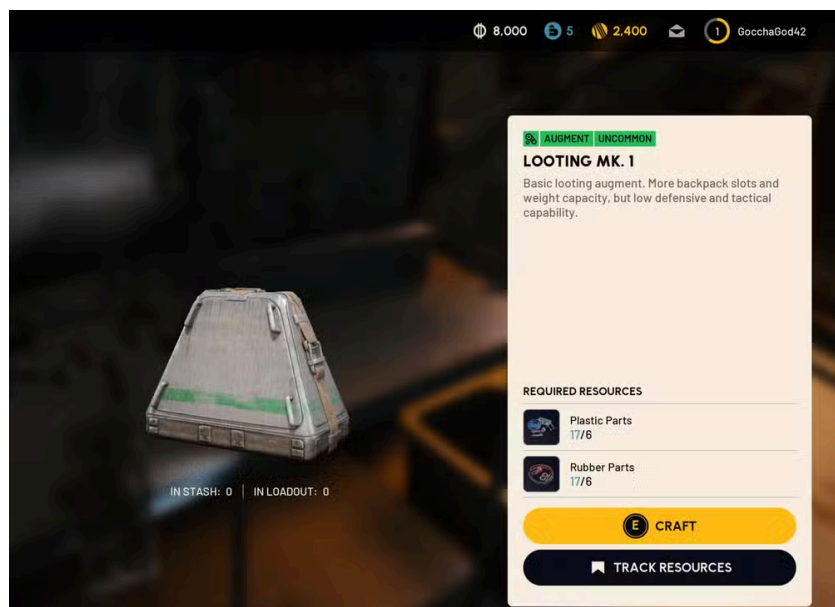

Category	Description	Example Items
Materials	The most commonly found item in <i>Karrion</i> and the backbone of crafting and tycoonning. Materials are separated into Raw , Processed , and Refined .	Rotten Flesh - The most common material. Can be processed into more useful materials. Crude Metal - The backbone of building. Required for all forms of buildings. Grease - The essentials to crafting consumables and weapons. Fabrics - Used for all forms of accessories. Gun Parts - Rare items required for advanced weaponry. Steel - A coveted component of advanced weaponry and buildings.
Accessories	Equipped to the player's Body, Accessories are the	Kevlar - Weighted armor that protects players from all

	basic tools for survival in the wasteland.	forms of weapon damage at the cost of mobility. Can be stacked. Oxygen Tank - A heavy item necessary for PvE and exploring highly radiated areas. Personal Box - Grants players an extra 'Valuables' slot in their inventory.
Consumables	Essential tools to get out of difficult situations. Flexible, to help with defensive and offensive situations alike.	Gas Grenade - Creates a damaging cloud that also disorients players. Negated by 'Oxygen Tank.' Band Aids - Takes time, but heals any form of flesh wounds. Can only do so much before you need a 'Health Stim.' Health Stim - Grants players a burst of health and an EOT effect. Fast use.
Weapons	The basic means of self defense in the wasteland. Without a weapon, you won't last long.	Crowbar - Basic melee weapon. Slow, hard hitting, but unreliable in the wasteland. Crossbow - Ranged weapon made from scraps. High damage compressed in a small, slow firing mechanism. Pistol - Basic firearm made from scraps. Jack of all trades, master of none.

		Bolt Action Rifle - Advanced firearm with long range and slow fire rate. One shot can be fatal. Shotgun - Advanced firearm that fires short range pellets in a spread. Deadly close up, useless at range. Assault Rifle - Advanced firearm. Direct improvement of the 'pistol' in every shape and form.
--	--	---

3. Crafting

Crafting in *Karrion* will follow a very simple formula: As long as the player possesses the necessary Items and meets their respective quotas, they will be able to instantly craft their desired items.

Crafting in ARC Raiders

4. Building

Building in *Karrion* will also follow the same system as Crafting: All buildings have a set material requirement in addition to an XP quota, and as long as players fulfill those two criteria, they will be able to place the respective building.

Building in Cult of the Lamb

Like *Cult of The Lamb*— and most other civilization simulators—tycoon building in *Karrion* will follow a grid-based system to allow for user freedom and optimization. Like traditional Roblox Tycoons, players will have set limits on each type of building for simplicity.

5. Map

The map should be at minimum medium scale (large scale if possible) with multiple points of interests scattered across three types of zones, separated by level of risk.

Zone Type	Description
Safe Zones	Quadrants with minimal risk and danger. Possible hostile Players. No sign of Carrion activity. Low levels of radiation and infection mean the environment is reasonably safe, though prolonged exposure can be dangerous.
Quarantine Zones	Moderate levels of Carrion activity. Moderate levels of radiation and infection require players to bring necessary accessories to survive.
Infection Zones	High concentrations of Carrion activity. High levels of radiation and infection mean unequipped players may perish in seconds.

Below is an example map with zones and player tycoon spawns highlighted:

Overlay over an Escape from Tarkov map

6. PVE

The primary PVE aspect of *KArrion* comes in the form of Carrion, dangerous infected beasts who wander the wasteland. Upon death in the wasteland, player's bodies can also become walking Carrions, and will be able to attack other players.

Artistic reference from Carrion (2020)

KArrion can be separated into different classes, listed from least to most dangerous and valuable:

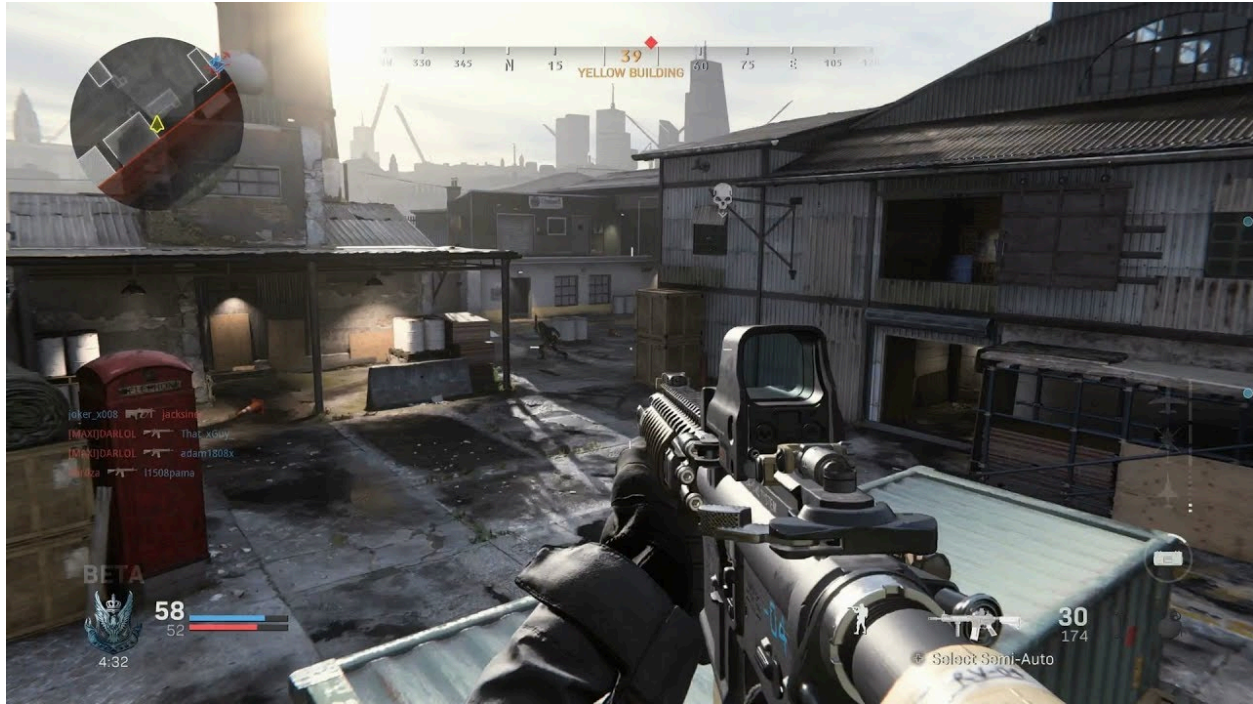

Class	Description	Drops
Spawn	The most common form of <i>Karrion</i> . Small melee enemies that spawn in swarms. Fast, but fragile.	Rotten Flesh
Bane	Larger enemies with melee	Rotten Flesh

	and ranged capabilities. Sacrifices mobility for high endurance. Capable of creating Spawn swarms.	Crude Metal Grease Fabrics
Percius	Large melee enemies with high endurance and mobility. Capable of advanced movement. Encounters are deadly.	Rotten Flesh Crude Metal Grease Fabrics Gun Parts Steel

7. Combat + Player movement

Combat in *KArrion* will follow a very traditional formula: Gunplay will be gritty, but TTK will generally be high to avoid hyper realism. This establishes a low skill floor that is more accessible to a wider audience, while still allowing for tactical decision making and mastering movement.

Movement in *KArrion* should be fluid, unrestrictive, but still realistic. Though it is not a movement shooter, players should still be allowed to perform basic secondary actions: For example, rolling, sliding, and dashing (in addition to basic horizontal movement). Good references are *Call of Duty: Modern Warfare* (2019) and *Arc Raiders*.

Call of Duty: Modern Warfare (2019)

8. Looting

Unlike most survival games, all materials / Items found on the map will come in the form of scattered '**Safeboxes**' – as opposed to individual pick ups. Safeboxes can be separated into three different categories, each with their own properties. They are listed below:

Value Level	Property	Contains:
Low	The most common type of safebox. Found in all areas.	- Guaranteed Raw Materials - Possible Processed Materials - Small chance at Refined Materials
Medium	Rarely found in safe areas. Requires further exploration.	- Guaranteed Raw Materials - Guaranteed Processed Materials - Possible Refined Materials
High	High risk high	Guaranteed Refined Materials

	reward lootboxes found only in the most dangerous sectors.	Possible crafted Consumable, Accessory, or Weapon
--	--	---

Some safeboxes can be opened directly by hand, others require special equipment to unlock, and the rarest must be extracted back to your tycoon for processing.

Example of 'safeboxes' in Arc Raiders

9. XP / Progression

XP in *Karrion* is earned from all aspects of gameplay: Building, processing/refining, combat, looting, etc. Accumulating XP allows for players to unlock more advanced buildings, blueprints for different items, and other rewards.

Narrative, Art, and Worldbuilding:

Flesh is Fuel.

In the years following an unknown biological plague, the last pieces of human civilization become hotpoints for Vultures, starving nomads damned to survive off scattered technology and decaying biomatter.
